Impossible installation deadline met by using InstaLay

Products used: InstaLay 25hg (high grab adhesive)

Floor finish: Amtico LVTs
Installer: Designer Contracts
Distributor: Home Foundations

At a new four bedroom house in Falkirk, Scotland, the flooring contractor was given just two days to complete the installation of the whole ground floor and two upstairs bathrooms, which would have been an impossible timescale using traditional methods.

However, by using the InstaLay self-adhesive flooring installation system, the deadline was met as it required minimal sub-floor preparations and was simply loose laid, avoiding the need for time consuming smoothing compounds and messy adhesives.

Although the concrete sub-floors were new, moisture was not a problem because InstaLay provides a moisture tolerant solution which can be used on floors where moisture levels are above the normally accepted level, reducing the need for expensive liquid damp proof membranes.

The luxury vinyl tiles were rapidly installed in the hallway, sitting room, kitchen/diner, downstairs cloakroom and both upstairs bathrooms. InstaLay ensured excellent finished floors which were warmer and more comfortable to walk on.

InstaLay also provided additional benefits:

- Its unique self-adhesive construction considerably reduced installation time and overall costs.
- Being loose laid, it is quick to fit, clean and easy to work.
- Floors could be walked on immediately after installing the LVTs.
- It will not deteriorate or collapse over time, providing superb durability.
- It is environmentally friendly and hygienic, with low VOC emissions.
